

CTP COMPANY SERVICES

AUTHORISED SPTS SERVICE PROVIDER FOR PLASMA-KIT TOOLS

INTRODUCTION TO THE COMPANY

We are a small but flexible service, training and parts provider that specialise in support services for the older range of STS plasma based R+D and Production tools.

As the only authorised service contractor we still have very good links with the original manufacturer STS (now SPTS) this enables us to source spare parts or even get new parts manufactured using the original drawings from STS.

We currently can support all of North America, Canada, Europe, Scandinavia and the UK with either training, site service visits or parts deliveries.

INTRODUCTION TO THE OWNER

My name is Gareth Morgan, I worked for STS for 23 years in various roles ranging from International Service Engineer to finally the Training and Technical Publications Manager. I left to start my own business up in 2004. Since then the business has steadily grown and now employs three people with me personally conducting all site visits.

We are still a small company but I believe this also makes very competitive and flexible to fit in with customers requests for backup support.
